## initial consultation

Inspiring **exhibits and exhibitions** need more than just good ideas – they need to be executed properly.

werk5's wide-ranging expertise spans everything from concept development to final implementation. **We advise you** on how your exhibits can be realised in an inclusive and interactive manner, whilst maintaining the highest technical standards.

**Please contact us for a free initial consultation regarding your exhibit!**

From selecting the content and choosing the right format to finding the ideal placement – **we bring structure to your ideas**. An initial consultation gives us the opportunity to get to know your ideas and requirements in more detail and to explore initial options for bringing them to life. Together, we'll work out how your idea can take shape.

Based on the **free initial consultation**, we'll draw up a tailored offer for you. Once your order has been confirmed, we can get started right away.

# planning

design  
+ construction

As experienced model makers, we know that every detail counts. It is only through the precise **interplay** of all components that a truly cohesive exhibition experience is created.

We support you in planning interactive exhibitions and inclusive exhibits – using sustainable materials, modular construction and modern digital technology that continues to inspire visitors over the long term.

We kick off the project together. Drawing on our expertise, we work with you to **develop** a concept that makes the most of your exhibit's potential. During this phase, we define the materials, dimensions and method of implementation in an initial layout.

Quality begins even before production. Building on the development phase, we take charge of the technical **planning** of your exhibits, from the precise creation of data to the graphic design. This also includes the typesetting of Braille and careful proofreading in accordance with current DIN standards.

We recommend reviewing the designs in consultation **with experts by experience**. These tests can be carried out during both the development and planning phases. Technical prototypes are also particularly well suited to testing and defining functionality and stability at an early stage of the process.

This allows concepts to be refined and specific designs to be tested using prototypes.

LABOR

# production

manufacture  
+ assembly

Drawing on our many years of experience and our interdisciplinary team of **specialists** from the fields of craftsmanship, design and media technology, we create bespoke solutions and high-quality exhibits in our in-house production facility. On request, we can install these on site.

**werk5.com**

We remain at your service even after the **project** has been completed. We provide comprehensive care instructions, offer training courses and are on hand to assist you with any queries regarding the maintenance of your exhibits.

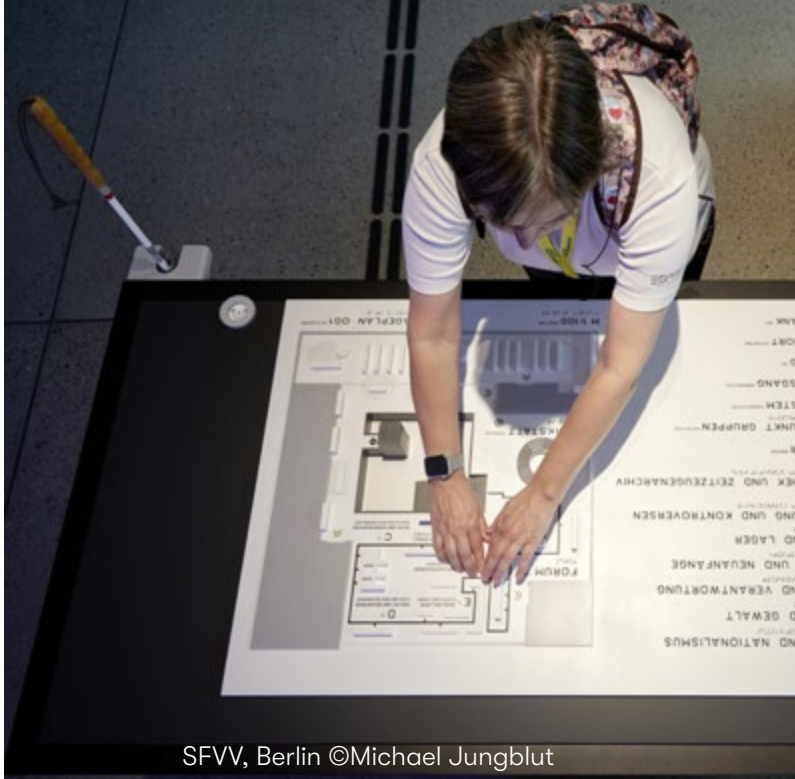

This is how we ensure that your project remains a success in the long term.

If required, we can also provide support with modifications or extensions – always with the aim of maintaining the quality and impact of your exhibits **over the long term**.
